**Define the
Problem**

The Problem

- 1** **Bad UX:** Hard to navigate, the only function of the app is to transfer, the other function are not able to be maximized by users
- 2** **BAD UI:** Design is outdated
- 3** **Need more dynamic UX,** to engage with the users in a personal level

case, just hire a team who has a clue! Get a startup to do it! I'm pretty sure two fresh grads in silicon valley could do a better job in a weekend hackathon. This app is next-level terrible. BCA, you should be embarrassed.

Jeez this UI and UX is really out of date 1y ago
★★★★☆ cikobear

For Christ's sake, go get some developer and change the UI and UX into the new or modern one. We all know that BCA is one of the most popular bank in Asia but come on, with the popularity, you all can make something better than this. Take a look at some of the rivals. They are all one million steps ahead than this lame old-school design.

Seems like it's useless to write down our thoughts or reviews here. They don't even reply or make some changes about the interface.

Take advantage of full screen area please 1y ago
★★★★☆ Ahmad Nabili

I dont know the app project still using the old ios sdk, still using old xib template, has set fixed size for the window frame size, still using old small launchImage, or anything. The app window size is so small. On iphone XS its not take full the screen area. You're one of a large bank in Indonesia, I think you can deserve better. Please tell your dev related to this.

SMS nya (yang di Inbox) ga bisa dicopy, di iPhone 5 iOS 6.0.2

Need new software developers 3y ago
★★★★☆ syuing y

Hi guys, I have a honest suggestion . As one of the main banks in Indonesia, I'm pretty sure your company have enough funds to build a better app. Good software designers are not that hard to find. I hope you can realize the importance of customer experiences on phone apps. When other Banks's app updated with the society, your app still make us feels like in year 2000. It's not what your customer expected for a world known bank like yours. I really hope you will considerate my suggestion, this is really what your customers want.

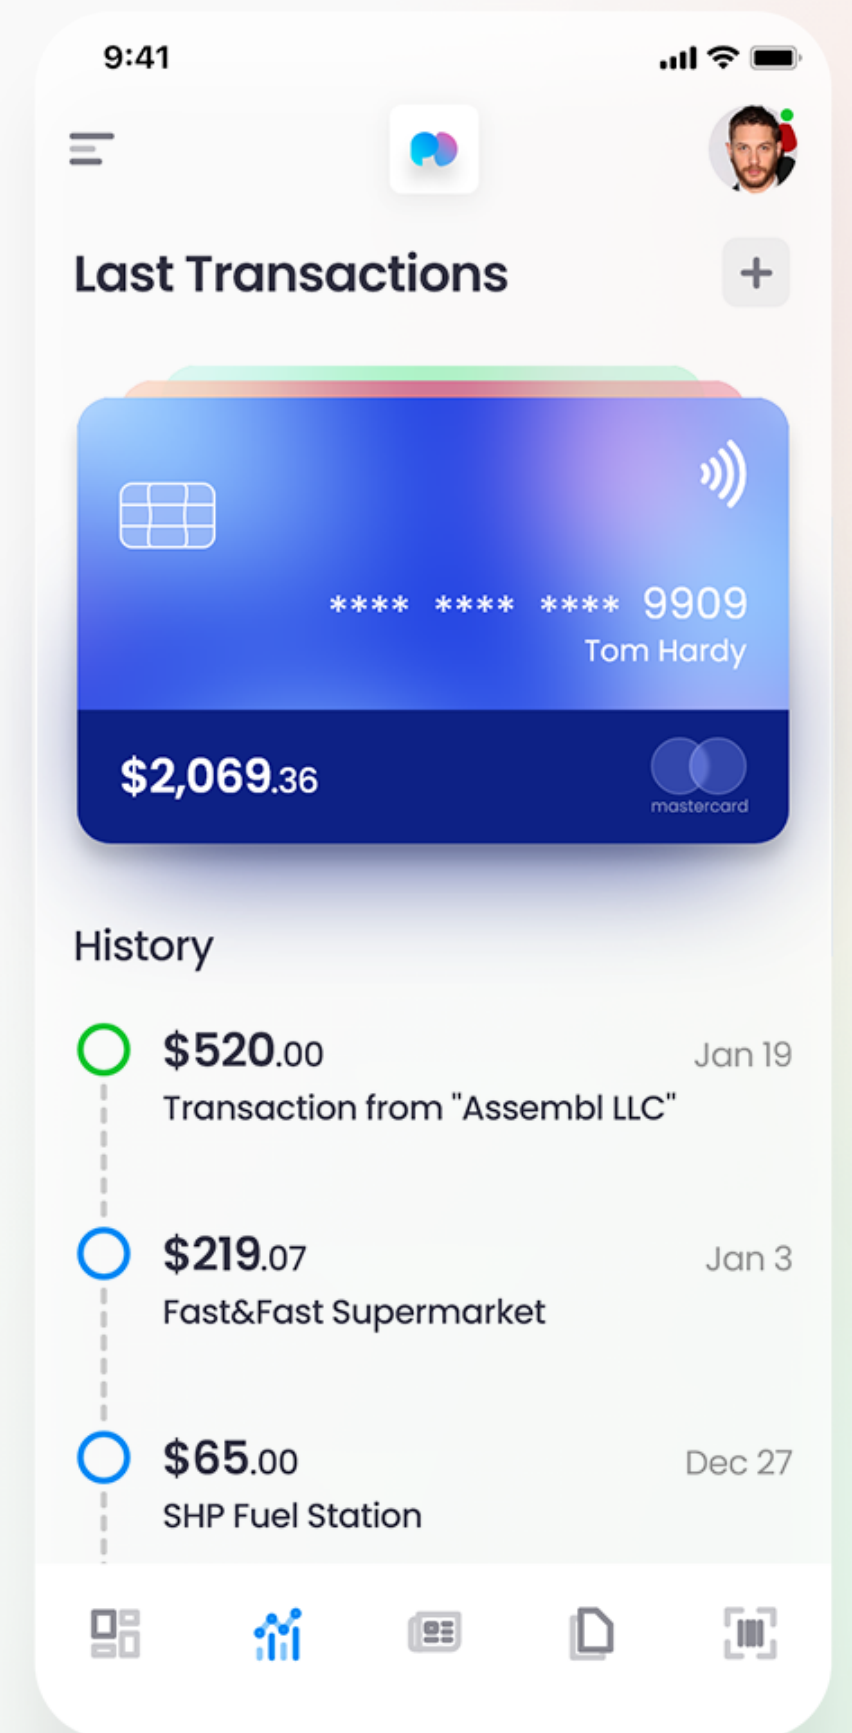

Terribly Poor UX 3y ago
★★★★☆ sstur1

This app has probably the worst user interface I've

Ideation & Inspiration

The Solution 1: Transaction History

Transaction history helps users keep track of what, when, and where they spend their money in. In a banking app nowadays, I do think that this is necessary to have. Not only to ease users, but also to prevent fraud or unwanted payment done without cardholder's notice and/or approval.

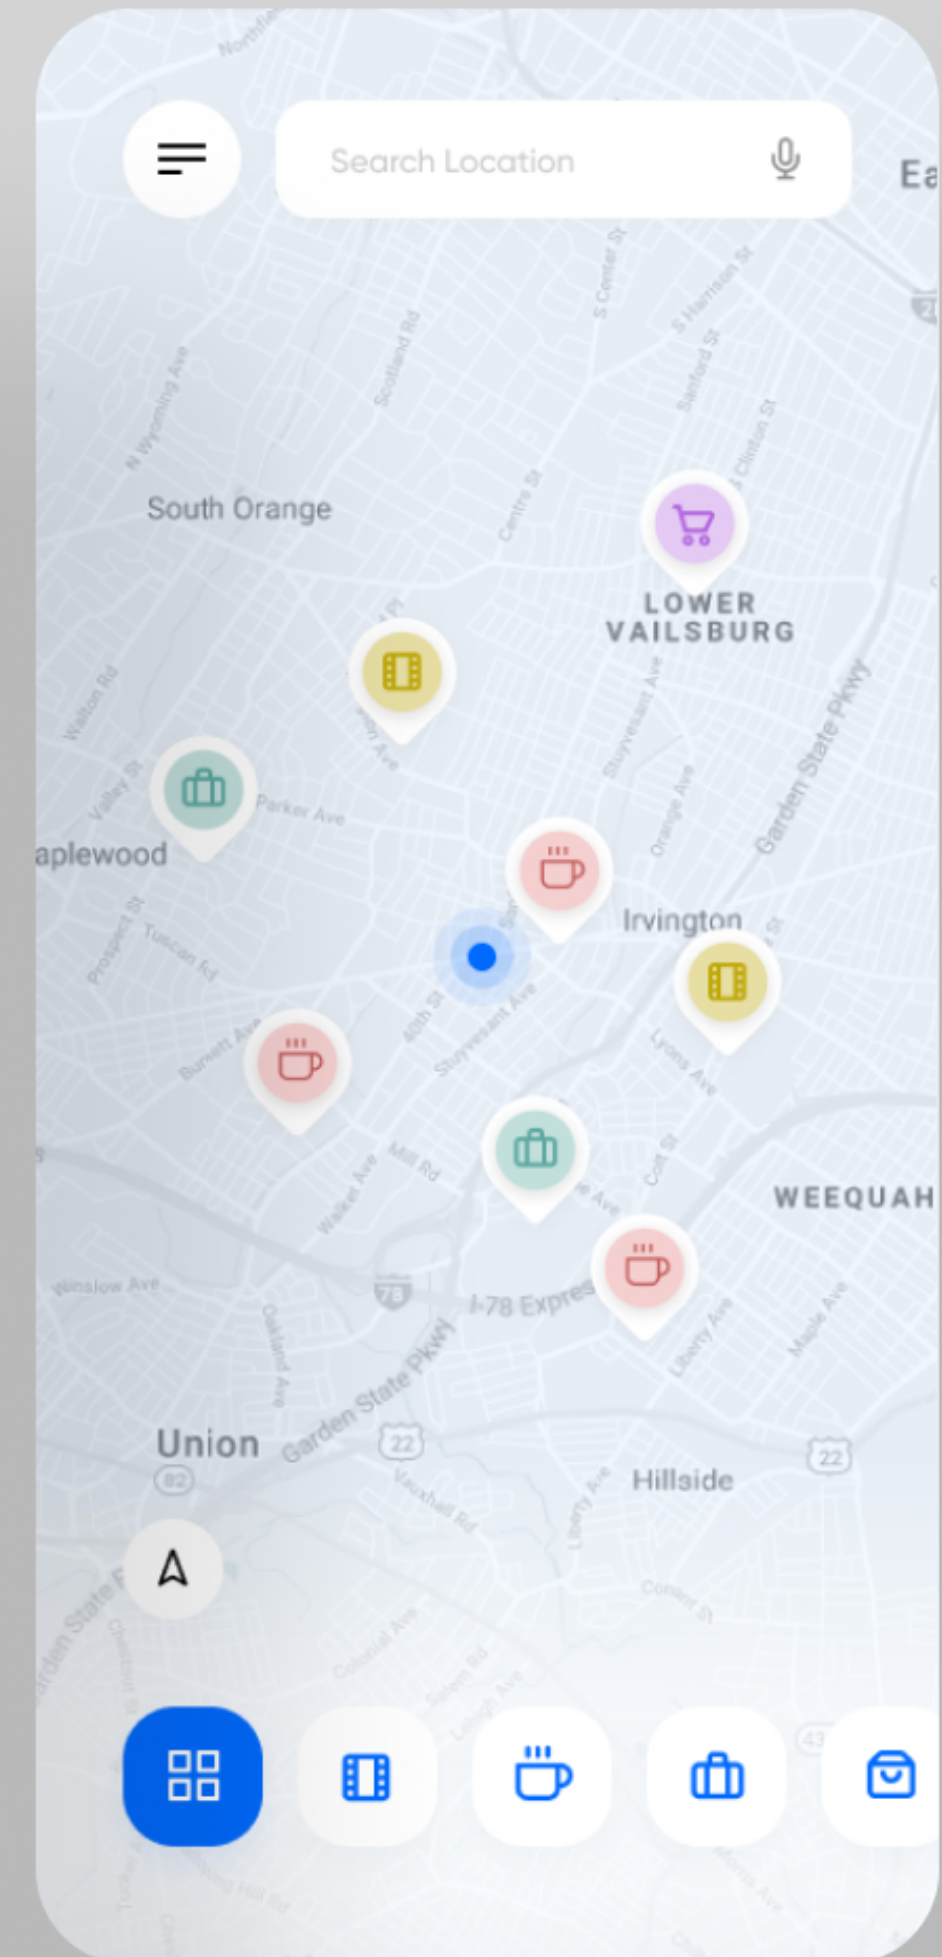

The Solution 2: Personal Statistics

While transaction history keeps track of users' expenses, personal statistics summarize their expenses by day, weeks, month, or year. It helps users aware of their spending and if the percentage of their spending makes sense according to what they actually plan and/or prioritize.

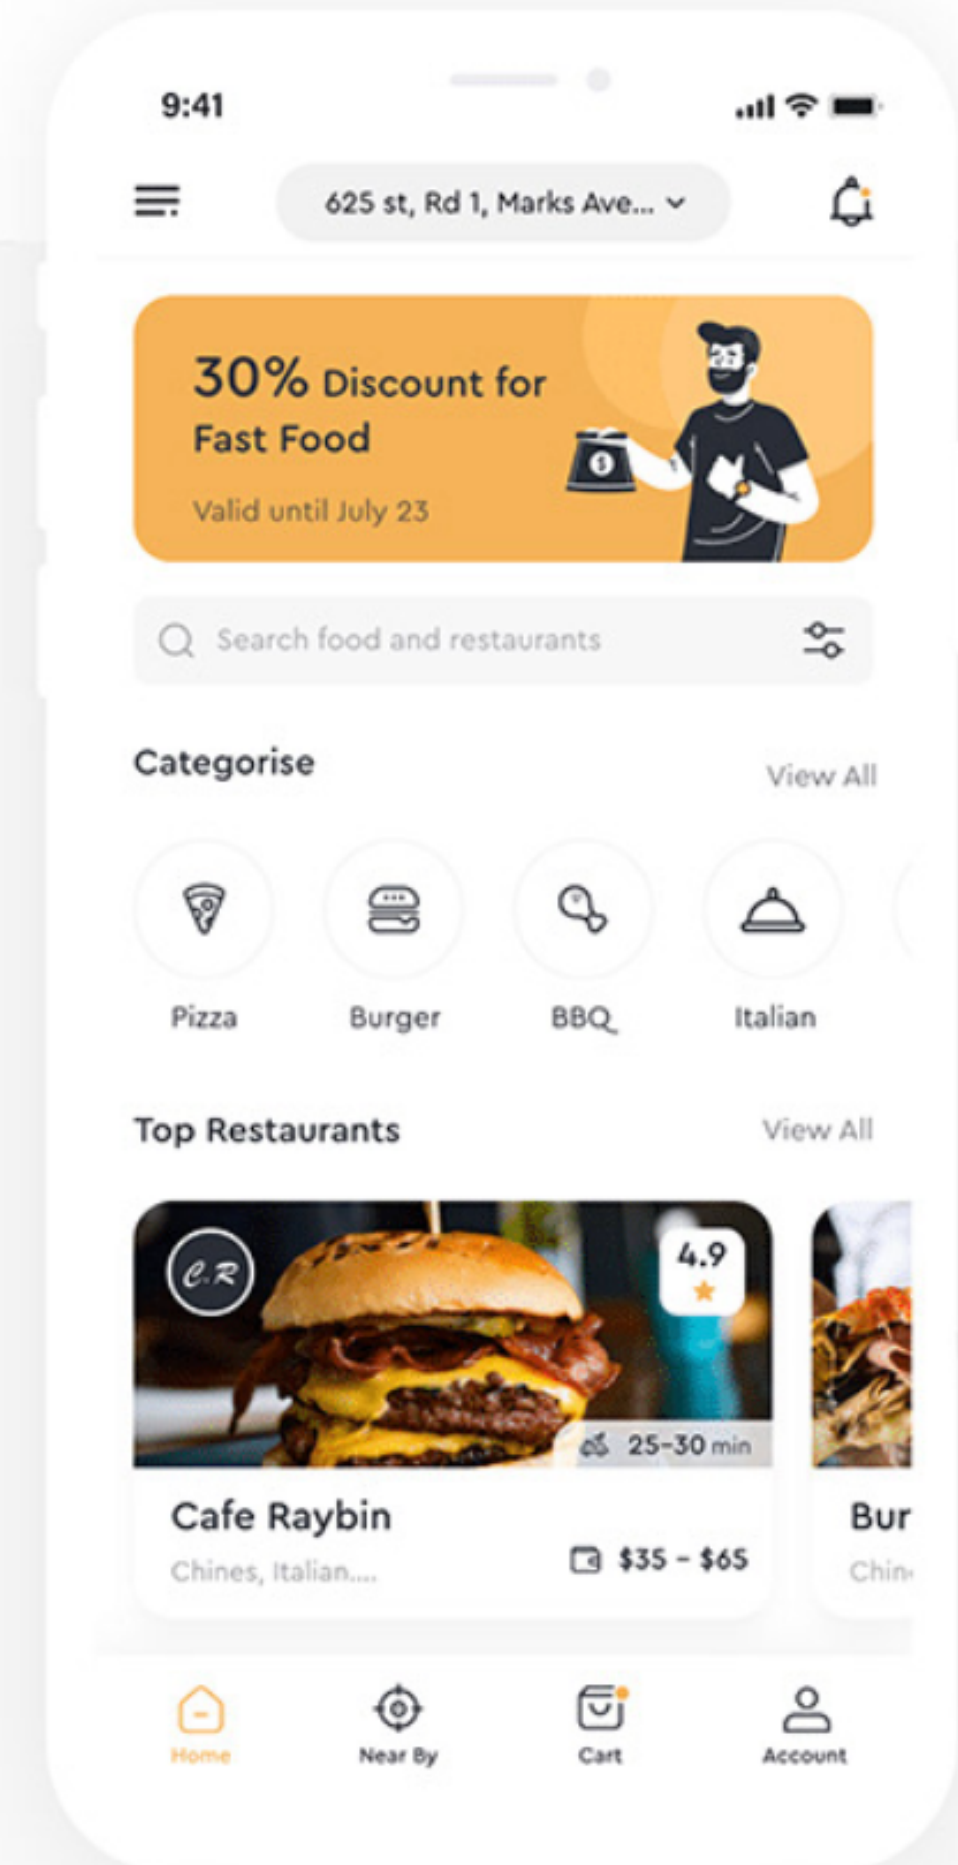

The Solution 3: Nearest ATM/Bank Map

Even though we are in a world moving towards a digital era where a lot of payments are done cashless, Indonesia is still a bit behind on that aspects. There are still a lot of payments that requires cash, and a lot of people might not be carrying cash too much. ATM locations might be hard to find too, especially if user is not in their familiar area. A location map can be helpful to spot an ATM.

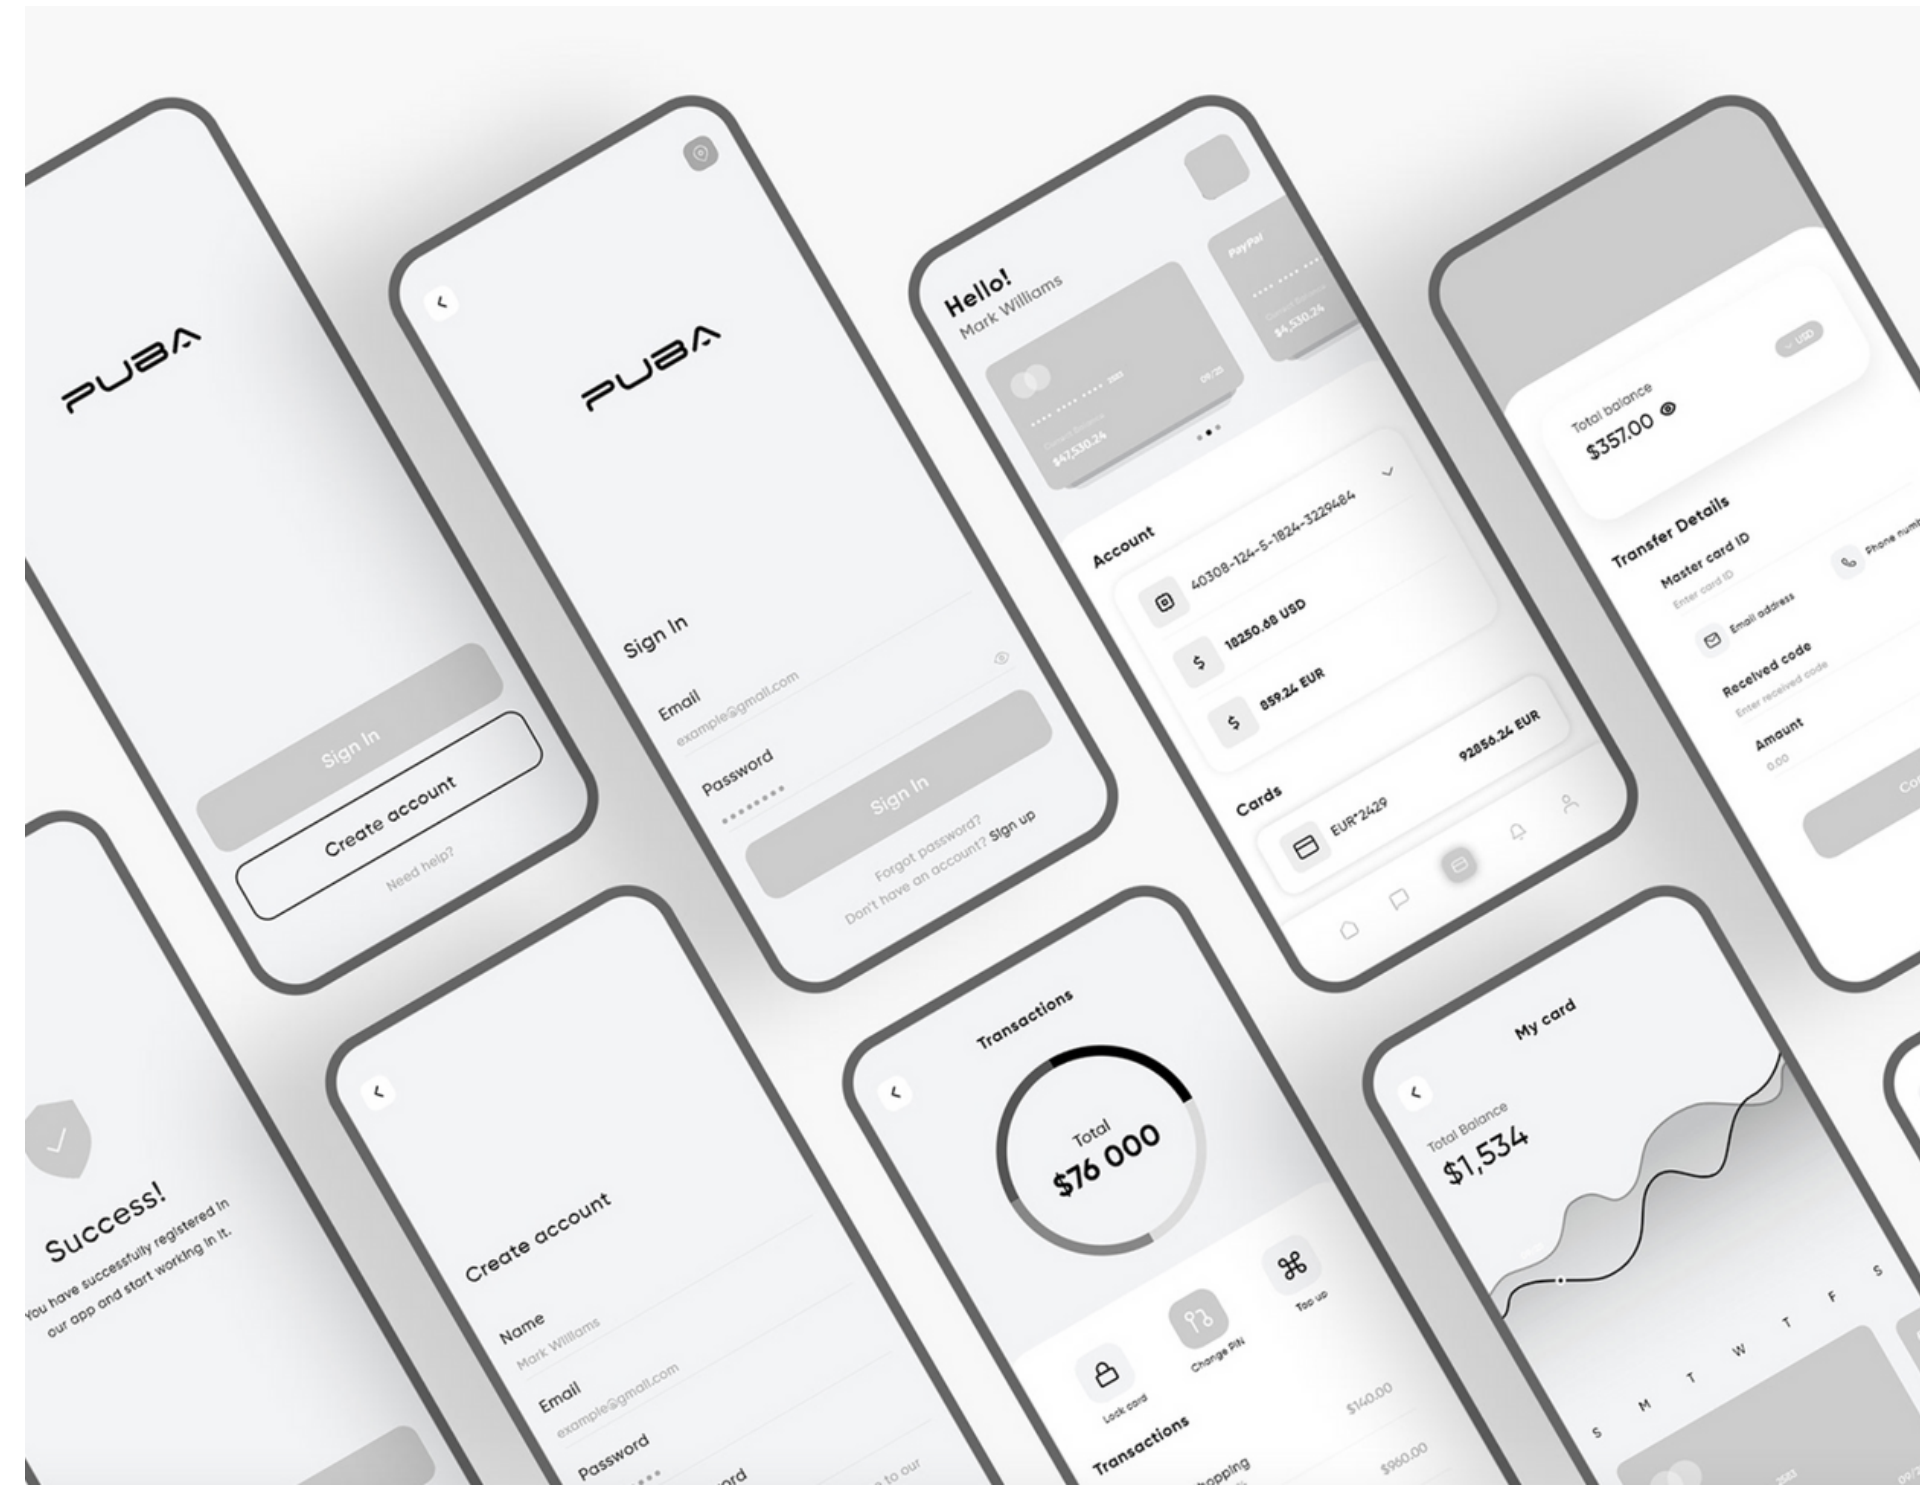

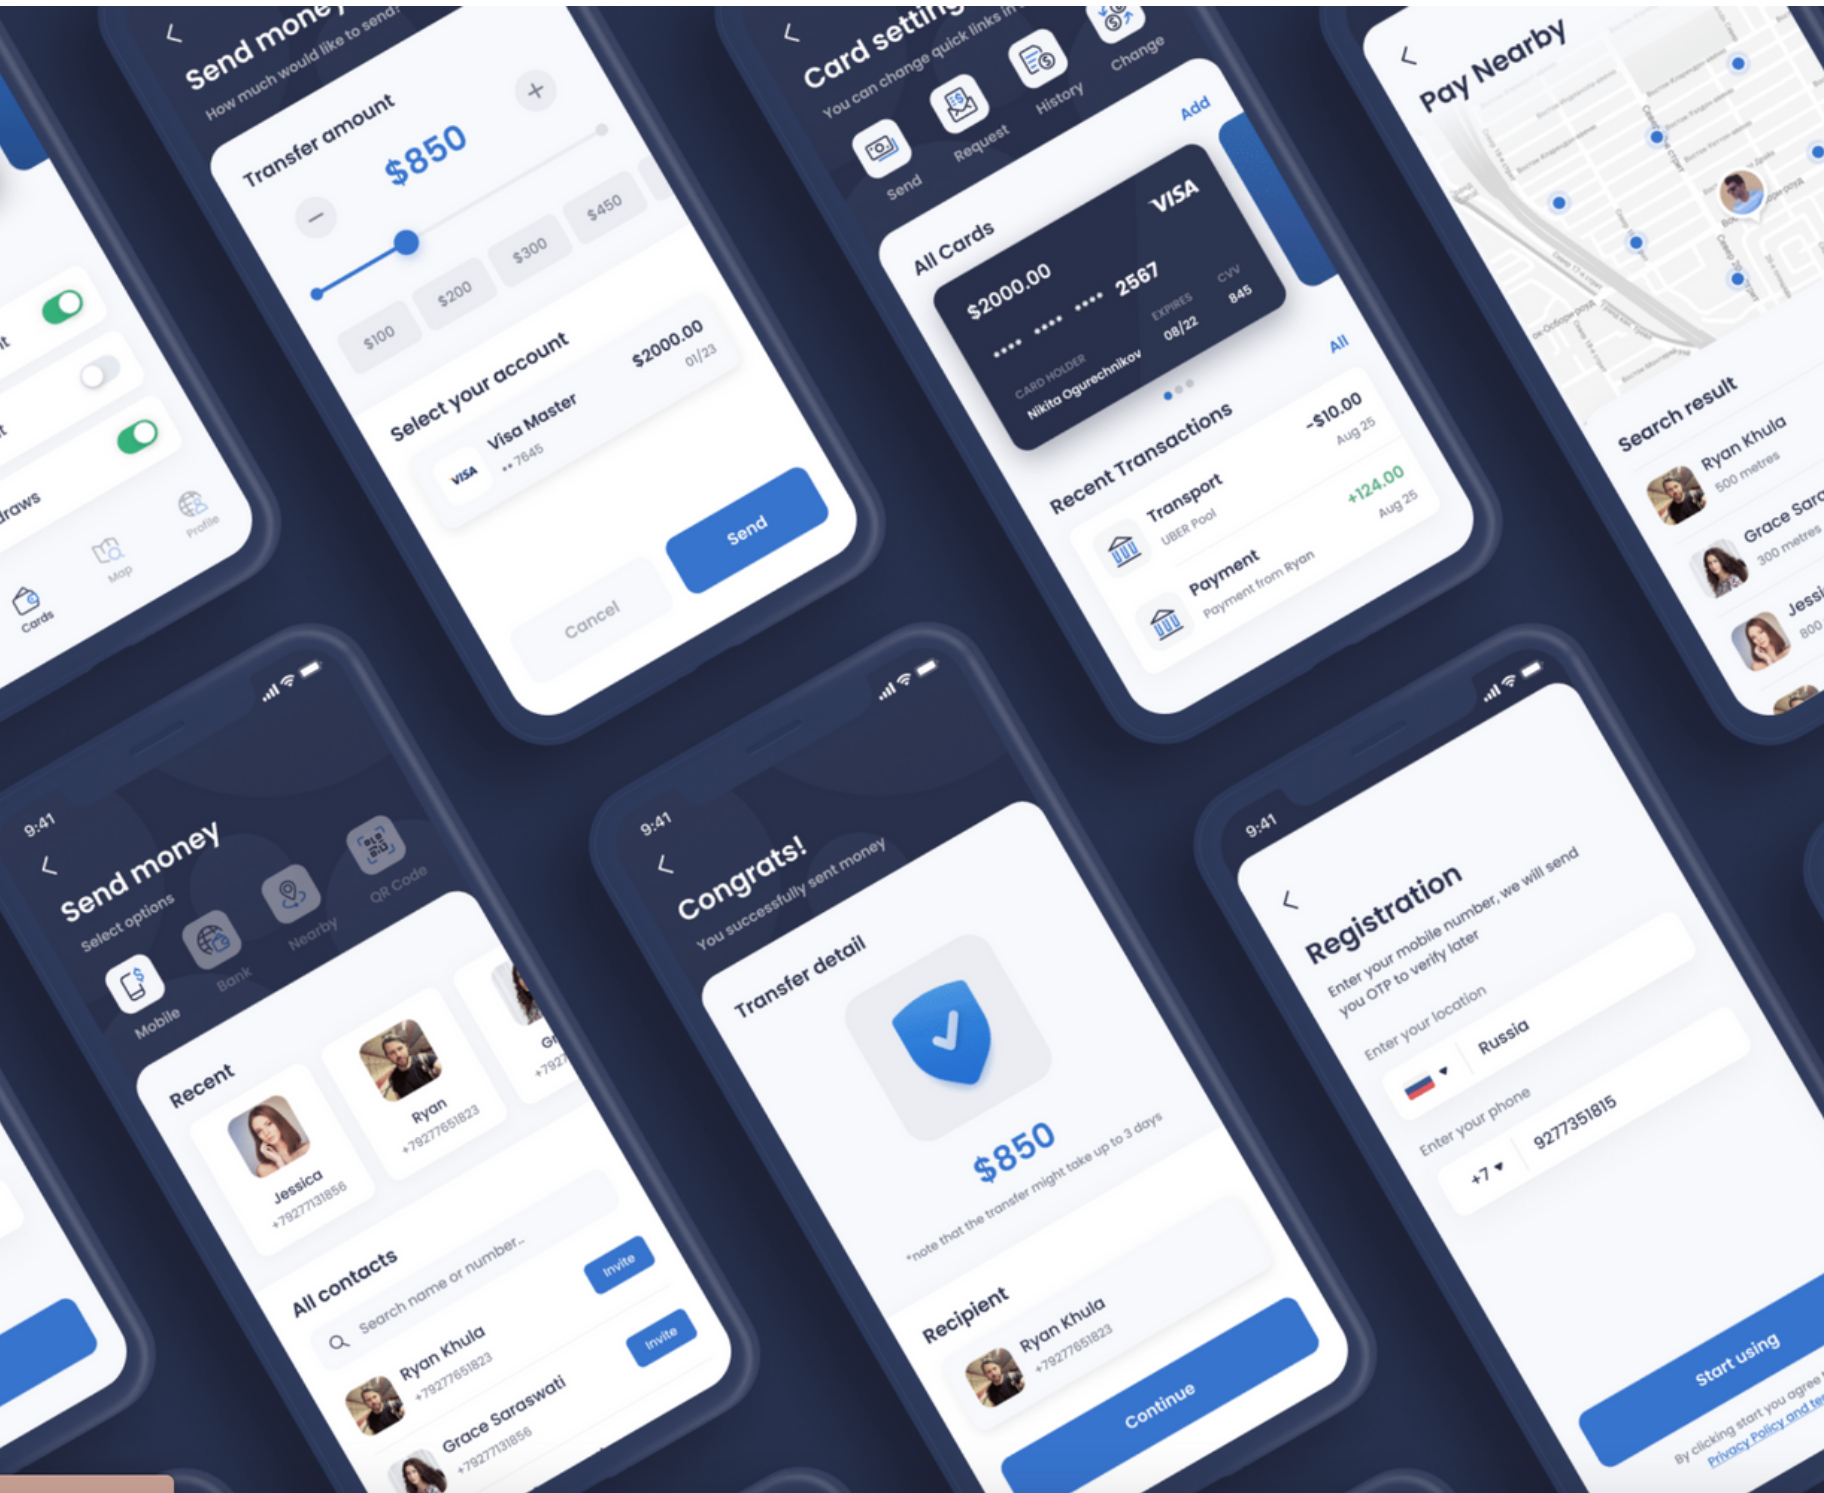

The Solution 4: Promo/Offers Info

Banks often collaborate with vendors such as e-commerce, restaurants, services, etc. Or, there might be an offer provided by the bank itself, e.g. credit card special offers, or a new reward system that might benefit the users. Having a promo/offer info section might be a good addition to the app.
